

Skipper MONITORING: a connected Tee-Shirt

Along the 2015 mini TRANSAT race, Microvitae's Skipper, Ludovic MECHIN, wears a Low

Energy Bluetooth connected Tee-Shirt that continuously and automatically sends recorded

physiological parameters to a remote device inserted in the mini 667's electronics board (in

agreement with « class mini regulations »). This monitoring is achieved thanks to MICROVITAE

extra-thin organic conductive films technology. Such experimentation is performed in very

« harsh » conditions such as complete isolation, strong humidity and permanent movement. Not

only Sport applications are sought, but also medical monitoring of isolated persons like elderly

people at home.
